

COLT® MODULAR RAIL RIFLE (MRR)

MRR8.5SC

MRR11.6S

MRR18.6XL

The MRR combines the battle proven Colt C8 Carbine core with the M-LOK Rail Attachment System.

FOR MILITARY, LAW ENFORCEMENT & CIVILIAN SHOOTERS

The MRR Upper Receiver has a monolithic top rail with side and bottom rail positions now implementing the Magpul M-LOK modular locking accessory mounting system.

The sturdy monolithic upper receiver provides ample rail space for various optics and is fitted with a Colt **free floating, cold hammer forged, chrome lined barrel** which increases barrel service life significantly when compared to non-chrome lined barrels of similar firearms.

The implementation of the M-LOK™ system allows the operator to add only the rails or accessories required for the given mission, thus reducing the weight burden on the operator. This system has reduced weapon weights by up to half a pound with the weight savings predominantly in the forestock area of the weapon. This improves the weapon's maneuverability and overall weight distribution.
