Night Vision Goggles Tracker 1x24

The YUKON Tracker 1x24 Goggle Kit includes a head mount for comfortable viewing and allows your hands to be free to take on another task.

The Tracker 1x24 Night Vision Goggle Kit pairs a Tracker 1x24 night vision binocular and a head gear kit for hands free viewing.

The unit has a magnification of 1x and an objective lens of 24 mm.

The unit's eye relief of 12 mm allows for comfortable viewing while the 200 m range of detection makes this unit perfect for general observation.

The Tracker 1x24 Night Vision Goggle Kit provides clear viewing in total darkness by utilizing a single built-in IR illuminator with a range of 150 m.

Throw the ergonomically-designed, rubberized body around your neck for a long expedition; the lightweight, compact unit is surprisingly comfortable, making your viewing experience that much more enjoyable.

Like all Tracker models, the Tracker 1x24 Night Vision Goggle Kit utilizes YUKON's newly designed Eclipse lens cap system, which removes lens cap hassles, dual eye diopter adjustment with central focusing, and a wide field of view.

YUKON's exclusive Eclipse lens cap system not only protects the unit from bright light, it also saves users from many irritations.

Everyone knows the hassles associated with binoculars' lens caps - they get lost or tangled, but without them the lenses become dusty or scratched up.

The Eclipse lens cap system features flip-top lens covers that can be flipped up to fit against the binoculars' body and rotated to ensure that they are out of the viewing field.

Also, the covers can be taken off all together.

In addition to the Eclipse lens cap system, the water resistant Tracker utilizes a soft, one-piece eyecup to prevent external light distortion and light leakage from the device, allowing the user to remain hidden in the night.

Night Vision Goggles Tracker 1x24

FEATURES

- View: Binocular
- Multifunctional system
- Single built-in IR illuminator
- Lightweight and compact
